DETAILED ACTION

EXAMINER'S AMENDMENT

1. The application has been amended as follows: on page 1 of the specification, in line 6 between "1999," and "which" the following has been inserted -- now U.S. Patent No. 6,372,106, --.

Allowable Subject Matter

2. Claims 23-40 are allowed.
3. The following is an examiner's statement of reasons for allowance:

In each of independent claims 23 and 24 the combination of limitations requires both the step of "establishing the constant run field at a ramp rate no greater than about 5 V/cm-s" and the analyte species to be nucleic acid. Guttmann '116 establishes a ramp rate no greater than about 5 V/cm-s for nucleic acid analyte species; however, the run field is not constant. The improvement in Guttmann is, in fact, to use a non-constant run field. See the abstract and col. 2:13-32. McCormick (Anal. Chem. 1988, 60, 2322-2328) establishes the constant run field at a ramp rate no greater than about 5

V/cm-s; however, McCormick performs electrophoresis on peptides and proteins. See the abstract.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
